

Easily Create, Communicate and Share Biotransformations & Metabolite ID Knowledge

Build a comprehensive knowledgebase and support a collaborative work environment to facilitate metabolite ID studies and improve sharing of biotransformation maps.

- Easily create comprehensive biotransformation maps.
- Use searchable Markush structures to represent all possible metabolites for work in progress.
- Interactively link relevant chemical, biological, toxicological, and analytical data to individual structures in the metabolism pathway.
- Generate reports in seconds using templates.
- Mine, re-examine, and apply the knowledge later in the process, or in an entirely different project.
- Leverage the data and information to others in your organization.

Visit us at our Booth to speak with an ACD/Labs representative and discuss solutions to aid your R&D efforts.
