

CPSA 2018 Colloquium

Patient centric blood sampling and analysis: Let's make this happen!

Wednesday 17th October, LaSalle, and 10:15 am – 11:45 am

Discussion Leader: Neil Spooner (Spooner Bioanalytical Solutions)

Scribe: Joe Siple (New Objective)

Mission

To bring together innovative parties and thought leaders that have an interest in developing and implementing technologies that enable high quality quantitative patient centric sampling and analysis and facilitating the acceptance of such by fellow scientists, the public, media, regulators, investigators, clinicians, payers, *etc.* This activity is part of the ongoing discussions of the Patient Centric Sampling Interest Group, which was founded following discussions at CPSA USA 2016 and 2017.

The focus of this event is to enable microsampling device manufacturers and users to standardise approaches for sample collection, labelling, interfacing with data systems, and automation. Further, the aim is to progress the agenda to enable the broad acceptance of microsampling approaches. This discussion based event will emphasise arriving at solutions and sharing of best practice.

Agenda

- 10:15 Brief intro by **Neil** outlining the purpose of the Colloquium (2 min)
- 10:17 Brief introductions by participants: Name, company, interest in patient centric blood sampling and analysis – 30 sec per person
- 10:25 Discussion – Developing a positive image for patient centric sampling
 - What does success look like? – *Can be achieved through ongoing PCSIG discussions*
 - What have we achieved to date? – *Can be achieved through ongoing PCSIG discussions*
 - Plans for the coming year – deliverables, responsibilities & timelines
- 11:00 Discussion – Integration of samples with downstream analytical platforms
 - What does success look like? – *Can be achieved through ongoing PCSIG discussions*
 - What have we achieved to date? – *Can be achieved through ongoing PCSIG discussions*
 - Plans for the coming year – deliverables, responsibilities & timelines
- 11:35 Summary and next steps
- 11:45 Close

Who Should Attend

Anyone interested in facilitating the progression of patient centric blood sampling and analysis to standard usage. This includes, but is not limited to, technology vendors and innovators, healthcare providers, investors, clinicians, clinical trials experts, clinical scientists, pharmacokineticists, pharmacologists, regulators, quantitative bioanalysts, clinical chemists, *etc.*
